

Transformers and Back to the Future Team Up

09 Jul, 2020

The first-ever **Transformers-Back to the Future** collaboration introduces the all-new character, **Gigawatt**. This new time-traveling Transformers Autobot commemorates 35 years since the groundbreaking adventure film, *Back to the Future*, took audiences back in time.

Gigawatt is a converting time machine robot that stands at 5.5 inches in Robot mode and can convert to **Time Machine** mode in 17 steps. Gigawatt includes a blaster and whip antennae accessories, and features movie-inspired details from the film, including **Doc Brown**-style goggles, a flux capacitor chest piece, and time circuits. In time machine mode, the gullwing doors open and wheels rotate from vertical to horizontal to produce a hovering effect as seen at the end of the film.

In addition to the collectible figure, from **IDW** comes *Transformers / Back to the Future* – a four-part comic book series that sees **Marty McFly** travel through time with the help of Gigawatt to stop the Decepticons plot.

This figure will be available for wide release starting **October 1, 2020** via [HasbroPulse.com](https://www.hasbro.com) (in the United States and Canada only) and select retailers around the world. Part one of the comic book also will be available October 1, wherever comic books are sold.
